Walker Presets

Walker Presets

These Walker settings can be copied and Imported by pressing the "I" button on the Walker and pasting the `recommended name` and settings.

Note: These are not the best possible or most optimal walker settings for the spawns listed. They are intended to meet two basic criteria so that they can be easily run by players who may not be the most familiar with Cyntara's Walker.

1. The waypoints should begin at the entrance of the spawn.
2. The waypoints should end where they start.
